

MBS Summer School 2022, Module 2: Artificial Intelligence in Business

Content:

Part 1

- Introduction to the fundamental ideas of AI
- Disruptions that AI brings to different industries
- The different types of machine learning as foundational concepts of AI
- Sources of data for machine learning within and outside of organizations
- Tools and Techniques for applying AI in business contexts
- Possibilities and pitfalls when applying AI in functional areas to solve business problems
- The societal, ethical, and legal implications of applying AI in business

Part 2

- Examination of a real-world business problem
- Investigation of the possible ways and types of AI to apply for solving the business problem
- Development of a detailed AI solution to the business problem in a team

Part 3

- Writing of the course paper
- Competitive pitch presentation of the suggested solution and discussion of the results

Learning outcomes:

Artificial intelligence (AI) is rapidly emerging as the most important and transformative digital technology of our time. Recent advances have led to a rapid proliferation of new approaches that are changing the competitive landscape for companies in almost all industries. Hence, it is important for future managers to understand this technology.

At the end of this module students will therefore have basic knowledge of the foundations of AI and its strategic implications for businesses. They understand the different types of machine learning as fundamental concepts of AI (e.g., deep learning, neural networks). They are able to develop strategies to leverage AI for value creation in business settings and apply related tools and techniques. Students are aware of the limitations, pitfalls and potential countermeasures when using AI. They are also able to discuss the societal, ethical, and legal implications of using AI in business.

In this course, students will be grouped into heterogeneous teams of 3-6 students by the chair. Within these teams, they will learn to develop their own strategy to solve a real-world business problem leveraging AI. The final outcomes will compete against the other's teams solutions in a pitch to the stakeholders of the problem.

Prerequisites:	A basic understanding of organizational processes and information systems in firms.
Contact hours:	30
ECTS:	3
Form of assessment:	Presentation of AI strategy and implementation plan (100 %)
Duration of module:	July 4 – 8, 2022
Lecturer:	Dr. Dennis Steininger
Language:	English
Range of application:	Graduate and advanced undergraduate students
